

## How to Start Trading

### 1: Access the Trading Section

“To start trading, navigate to the ‘Trading’ section from the main menu. This is where you can manage your trades and access the available trading sessions.”

### 2: Choose a Trading Session

“In PeaFX, you have two trading sessions to choose from: the London Session and the New York Session. Keep in mind that you can activate only one session at a time.”

### 3: Activate the Trading Bot

“Once you’ve selected your preferred session, switch on the automated trading bot. This intelligent system will trade on your behalf throughout the session.”

### 4: Automated Trading and Profits

“After switching on the bot, it will analyze the market, execute trades automatically, and send the profits directly to your account at the end of the trading session. The best part? You’ll never experience a losing trade because of the built-in breakeven system. The stop loss is set at the entry price, ensuring that you’re 100% safe in this trading system.”

### 5: Monitor and Relax

“While the bot trades for you, there’s no need for constant monitoring. You can sit back and let PeaFX’s advanced trading technology handle the work for you.”
